

**PMCOE in a Box**  
***Questionnaire 2:***  
***Delivery Application***

A key requirement for PMCOEs is to transform clinical care with evidence based precision medicine interventions. This questionnaire will help guide the development of your PMCOE's precision medicine interventions and software applications.

Proposed PMCOE Name:

Delivery Application

1. What is the proposed intervention? How do you propose to implement this intervention at Johns Hopkins and internationally?

2. Could a digital solution or tool extend your ability to deliver this intervention?

3. Describe what that tool would look like and how it would work?

4. What data or information would be needed to create this tool?

5. What data or information would be required to prove that it is effective?

6. How would you measure the impact of the precision medicine intervention at an outside hospital or internationally?

Data Science

7. What statistical methods or data science methods are required to deliver this intervention?
